G-Premio Bond from GC

One-component light-cured universal adhesive

Believe in zero compromises
G-Premio BOND from GC
One-component light-cured universal adhesive

Selecting the appropriate bonding for a given indication, and making sure to follow precisely the different procedure steps is not always easy. This is why GC developed G-Premio BOND - a one-bottle universal bonding compatible with all etching modes and which can be used not only for direct bonding, but also for repair cases & hypersensitivity treatment.

Moreover, GC wants to offer this ease of use & versatility without any impact on the quality of the bond. G-Premio BOND offers the advantages of a universal but with a top performance in all situations.

Because we believe in zero compromises.

Why Universal?

Universal in etching modes
The choice is yours!
- Self-etch
- Selective etch
- Total-etch

Universal in indications
Multi-use!
- Direct bonding*
- Repair cases*
- Hypersensitivity treatment**

Universal in performance
Optimal performance on different substrates!
- 4-MET: for a reliable adhesion to enamel & dentin
- MDP: for an excellent adhesion to enamel & dentin, zirconia, alumina and non-precious metals
- MDTP: to bond to precious metals***

***MDTP: Methacryloyloxydecyl dihydrogen thiophosphate
Zero compromises on performance

Displaying an excellent bond strength on both enamel and dentin regardless of the etching mode, G-Premio BOND guarantees an optimal performance and durability in time. Its unique composition based on three functional monomers (4-MET, MDP and MDTP) enables a stable bond not only to tooth structure, but also to composites, metals (including precious), zirconia and alumina. When combined with Ceramic Primer II, it will create a durable adhesion to any type of glass ceramics, even after thermocycling. Because we believe that a separate silane will provide the best long-term results.

Take a step towards no failures!

Aim for zero discolorations!

Thanks to an optimal wettability and penetration and a very efficient drying procedure (5 seconds at MAXIMUM air pressure), G-Premio BOND achieves an extremely thin film thickness of 3µm. Although the bonding is very fluid, it contains a high amount of fillers and photo-initiators which help to obtain a strong bonding layer. These characteristics coupled with the HEMA-free formulation guarantee the preservation of the bonding layer in time and prevent any hydrolysis leading to discolorations.

Choose durable aesthetic results!

Seek zero post-operative sensitivity!

With G-Premio BOND, there is no need to worry about open tubules possibly leading to post-operative sensitivity. When using the self-etch and selective etch approaches, the tubules are opened only slightly. In total-etch mode, the tubules will be fully infiltrated thanks to the bonding’s exceptional wettability and penetration ability.

Eliminate patient discomfort!
Zero compromises on manipulation

Attempt zero mistakes!

With G-Premio BOND, handling errors are virtually banned from the restorative routine. Combining an easy procedure with a low technique sensitivity, G-Premio BOND offers a complete peace of mind during the procedure:
- The bond strength is sufficient even when waiting time is not fully carried out
- The drying step is impossible to miss: 5 seconds, MAX air pressure
- Light-curing is very efficient thanks to a high photoinitiator content
- Visual control of the application is made easy by the yellowish colour of the bonding before light-curing

Enjoy a forgiving procedure!

Work with zero hassle!

With a working time of 7 minutes in its dedicated dish, G-Premio BOND allows stress-free working. It also offers you a versatile solution in one bottle: for direct bonding, but also for repair cases and hypersensitivity treatment. The application is made very easy thanks to its optimal viscosity and wettability; you could say G-Premio BOND “behaves like water”.

Forget about cumbersome routines!

Go after zero waste!

With G-Premio BOND, you can save precious time thanks to a very fast procedure: 25s in self-etch, 50s in selective or total-etch. This will be particularly beneficial in situations where isolation is not optimal, or in pediatric cases. G-Premio BOND also helps you to minimise material waste thanks to a unique silicon bottle cover optimising dispensing control and a thin nozzle delivering very small drops – up to 300 per bottle.

Stop wasting time and material!
Zero compromises on Direct Restorations

G-Premio BOND displays the highest bond strength values among the products tested after thermocycling, on both enamel and dentin in self-etch mode.

Shear bond Strength (MPa) to enamel and dentin in self-etch mode, after thermocycling (20,000 cycles)

Source: GCC R&D data, Japan, 2015
* Not trademarks of GC

Zero compromises on Repair Cases

G-Premio BOND displays an excellent adhesion to all substrates after thermocycling, including precious metals thanks to the MDTP monomer. The other products tested have a low performance on precious metals.

The use of a separate primer (such as Ceramic Primer II) together with G-Premio BOND on glass ceramics enables to obtain a durable adhesion to any type of ceramics.

Shear bond Strength (MPa) to indirect substrates after thermocycling (5,000 cycles)

Dare to go for...

Zero debondings

Zero mistakes

Zero discolorations

Zero hassle

Zero post-op sensitivity

Zero waste
