Product Catalog 2018/2019.

YES!

I WANT
IMPLANTS
FROM DENTAURUM.

More than 20 years of expertise, reliability and innovation in implantology – worldwide. Say yes!

Dentaurum Group – Quality Made in Germany

For more than 130 years, the name Dentaurum has stood for outstanding quality, continuous innovation and a high level of reliability. Dentaurum Implants, a subsidiary of Dentaurum, follows the same principles in the field of implantology. For more than 20 years, Dentaurum Implants' products have complemented Dentaurum's product portfolio for the orthodontic and prosthetic industry.

Customers from around the globe trust and rely on the products and the services offered by the Dentaurum Group - Made in Germany.

The new Dentaurum Implants product catalog shows the latest innovations in the field of implantology. You will find that we have further refined the clear systematic design and have adapted it to your requirements so you can now find the information relevant to your daily work quickly.

Please contact us directly if you require detailed information on our comprehensive product portfolio, our excellent course offers or our competent services. You can also visit our Online Shop or our website at www.dentaurum.com.

We would like to express our thanks to you for the trust you have placed in us in the past and we are looking forward to continuing to work with you in the future.

With best regards from Ispringen

Mark Stephen Pace
CEO Dentaurum Group

Axel Winkelstroeter
CEO Dentaurum Group

The Dentaurum Group.

*Quality is your
demand and our
expertise.*

Dental technology setting standards.

The Dentaurum Group develops, produces and sells products for dentists and dental technicians worldwide. The variety of products for dental technology, orthodontics and implantology is unique in the dental world. Dentaurum Implants, a manufacturer of implants, is a subsidiary of Dentaurum.

Quality inspires confidence.

As the oldest independent dental company in the world, we have worldwide experience with high-quality dental products. Our market success is based on consistent implementation of customer and market demands. This is why we are committed to the constant further development of the company and continuous improvement of the quality of our processes and products.

Service as added value.

There are many reasons for using Dentaurum Group products both in the dental practice and in the laboratory. Quality is the decisive factor. Our company philosophy is to not only offer high quality products, but to provide additional services as well. For example, we have a wide-ranging training program for new and advanced users with an internationally experienced team of course instructors. Contact us for further information.

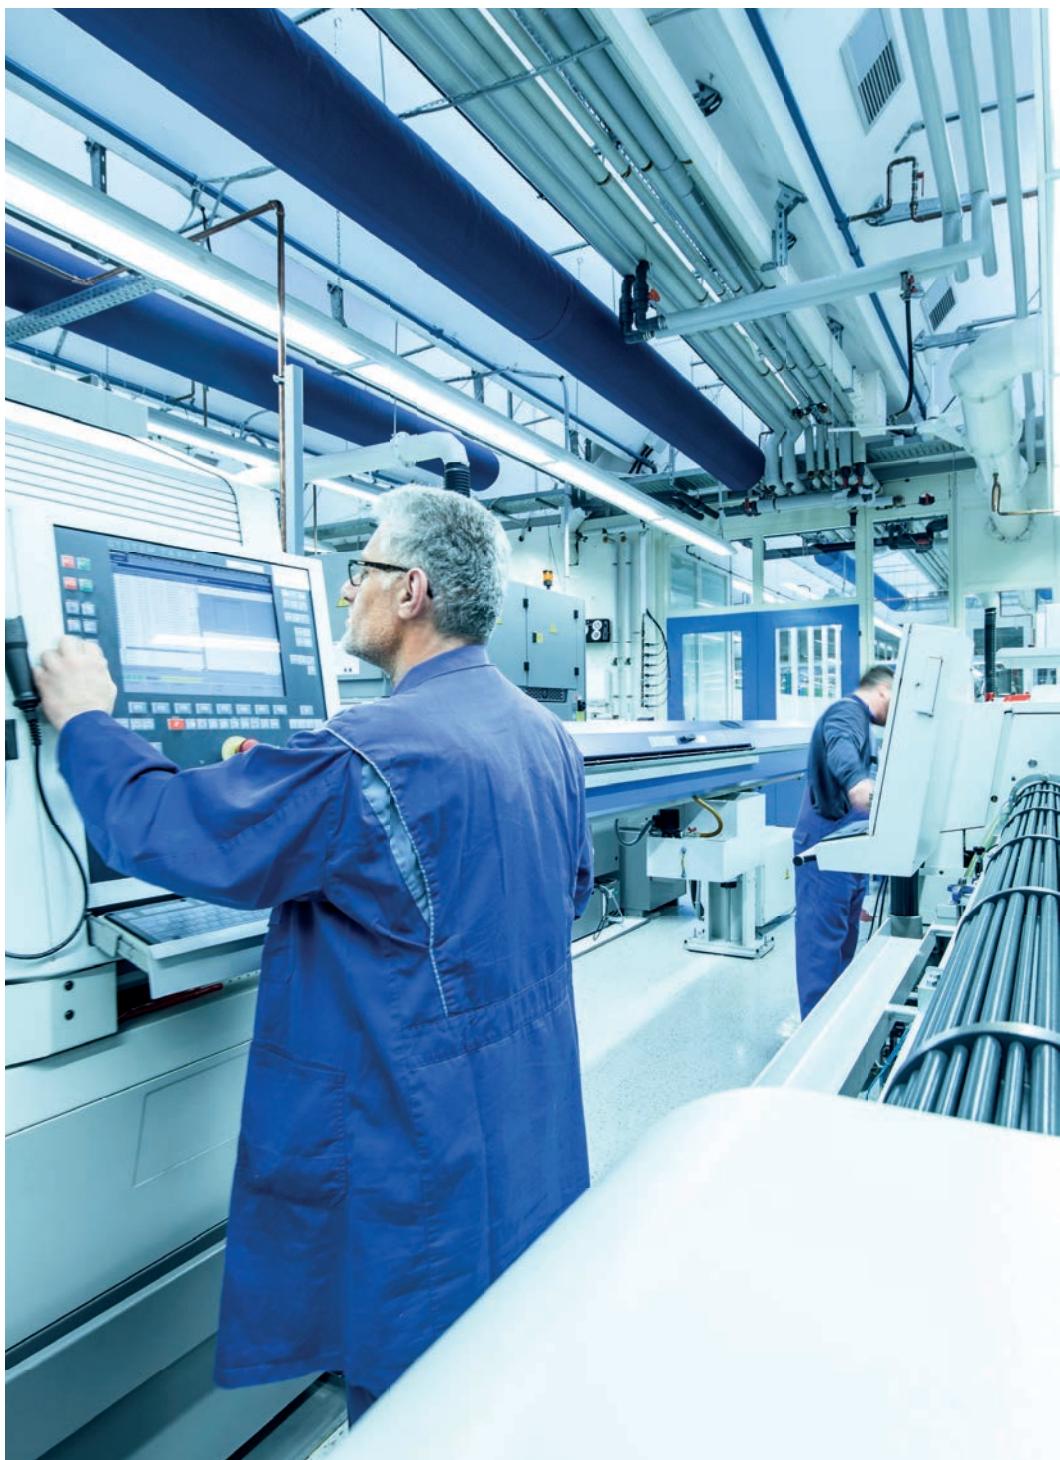

High-tech in-house.

There is a high level of professional knowledge in our company that has been built up over the years in our own research and development facilities, both in Germany and in France . Highly qualified employees work together in interdisciplinary teams to find answers to the challenges the future poses. At the same time, long-standing cooperations with experts from universities and clinics contribute to finding new developments and innovations.

A further result of these efforts: a comprehensive product portfolio which is one of Dentaurum's strengths. No other dental company has such an extensive range of products offering a total of more than 8,500 articles.

The implant system.

Maximum security.

The implant shape and the thread geometry of the tioLogic® implant are ideally coordinated. This ensures that a uniform, bone-conserving flow of force is created both in the cortical and cancellous bone which, in turn, guarantees high primary stability.

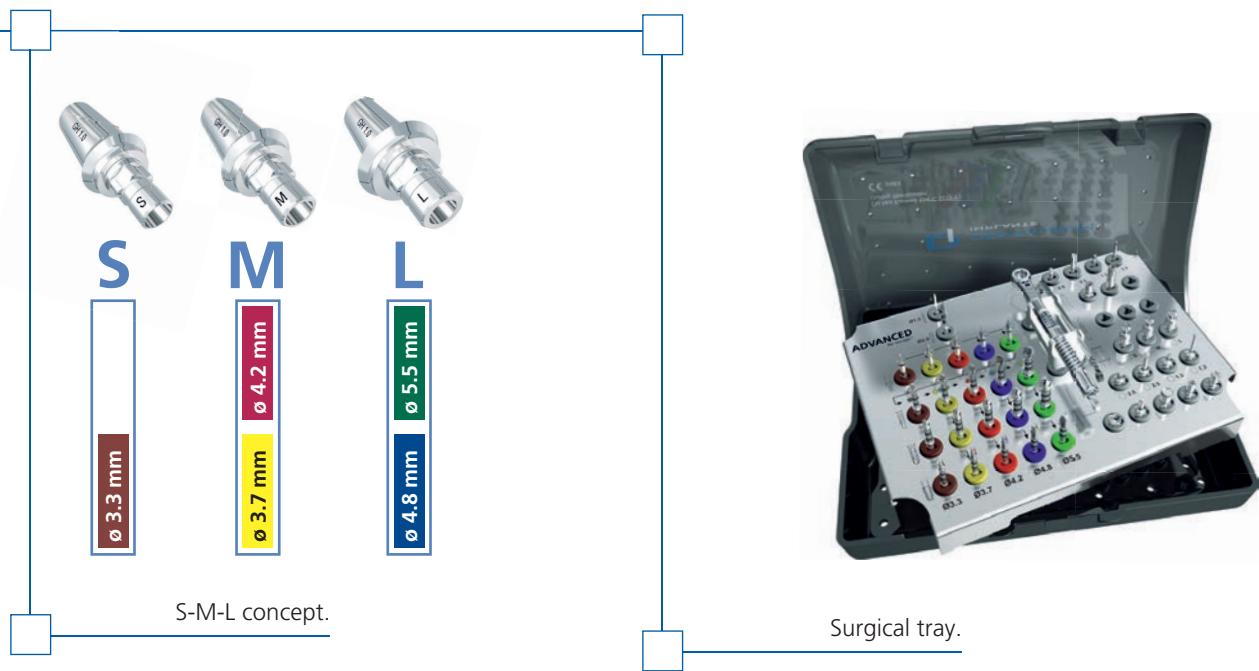

Perfect aesthetics.

The internal PentaStop® rotational security with integrated platform switching provides the optimum conditions for a durable, aesthetically perfect superstructure tailored to the individual requirements of the patients using the tioLogic® implant system.

Easy handling.

The S-M-L concept provides the user with a choice of 5 implant diameters, 5 implant lengths and 3 prosthetic abutment series for the prosthetic restoration.

The implant system.

The logical evolution.

Implantology has become an inherent part of dental treatment. Extensive research and development on the one hand, and the comprehensive expertise of dentists and dental technicians on the other, mean implants are today fitted routinely, much to the benefit of the patient.

Dentaurum Implants can look back on more than 20 years of experience in implantology while the parent company Dentaurum has over 130 years' experience in prosthetics. It is on this solid foundation that the tioLogic® implant system is based. In extensive dialog with experts from clinics and dental offices, we combined proven ideas with innovative solutions while considering future demands.

Service.

Needless to say, the hardware behind the tioLogic® concept must be convincing in every respect. The same is true also for the software, support services and advice offered by the supplier. Dentaurum Implants has much to offer the dental team: a competent hotline, comprehensive documentation, a wide range of courses, high-quality materials for keeping patients informed and medical product advisors who can visit on-site.

The factors of success for an implant system.

There are many single factors that, under long-term aspects, make implant treatment a success. As the developer and manufacturer of an implant system, we have no influence on patient-related factors such as oral hygiene. As far as having an influence in the areas of implant design, system concept and the practitioner's affinity for a product are concerned, there are three areas of focus which have proven to be the basic success factors:

Safety. Aesthetics. Handling.

Only when all three factors are equally fulfilled, with demands on safety at the forefront, are the prospects of success at best. This is why special attention was paid to fulfilling the specifications in these three basic areas when the tioLogic® implant system was being developed.

CONCLUSION:

*A convincing concept.
State of the art.*

Maximum security.

It is of fundamental importance for a modern implant system that its safety is convincingly proven and documented in both theory and practice through recognized methods. The tioLogic® implant's outer geometry was developed in cooperation with Bonn University. Their comprehensive FEM analyses^{1,2} prove the above-average results for peak strain and distortion levels. The areas thread design, thread geometry and implant form were examined separately.

Perfect aesthetics.

Implant-borne restorations are increasingly preferred to removable or tooth substance-challenging restorations, also in view of improved aesthetics. In this respect, it is important that implants and superstructures provide aesthetically perfect and long-term safe solutions. The design of the inner connection of the tioLogic® implants prevents bone collapse and ensures excellent compound stability. The inner geometry was developed using FEM analyses³ and its stability has been proven by long-term durability tests according to ISO⁴ at the Fraunhofer Institute.

Easy handling.

To work economically with a modern implant system, it is imperative that all components are easy, safe and user-friendly.

When designing the tioLogic® implant system, some important aspects regarding the handling were realized: color-coding for quick visualization, laser marking(s), an optional integrated depth stop and simple-to-use packaging. The unique S-M-L system provides prosthetics with convincing practice and laboratory-related customization possibilities and clarity.

The tioLogic® implant system.

S-M-L concept.

5 implant diameters. **5** implant lengths. **3** series of abutments.

Integrated platform switching.

The optimal grading of implant diameters and lengths ensures that the appropriate implant is used for the indication. Components of the 3 series of abutments are made of plastic (temporaries), titanium and precious metal and include CAD/CAM, bar, ball, bridge, AngleFix, and LOCATOR® abutments. The construction components S are used for the implant diameter 3.3 mm, the construction components M for the implant diameters 3.7 mm and 4.2 mm and the construction components L for the implant diameters 4.8 mm and 5.5 mm. All components are laser-marked with S, M or L for exact identification.

3 series of abutments.

5 implant diameters.

3 series of abutments.

5 implant diameters.

7.0 mm

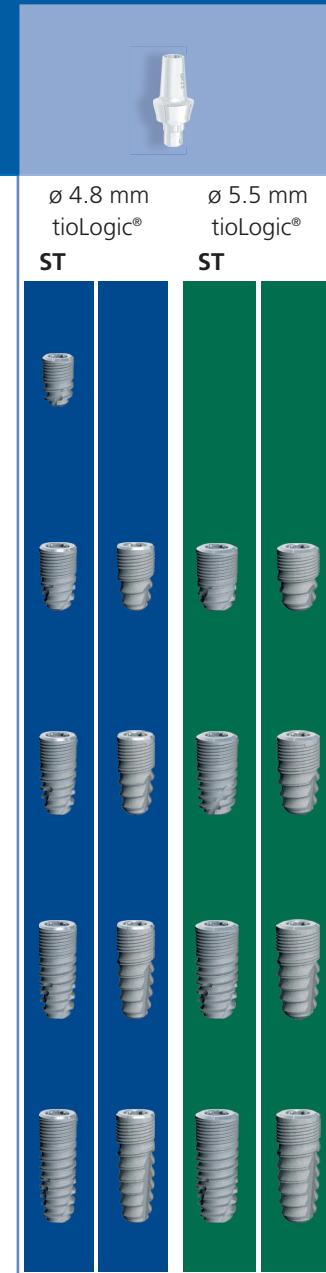

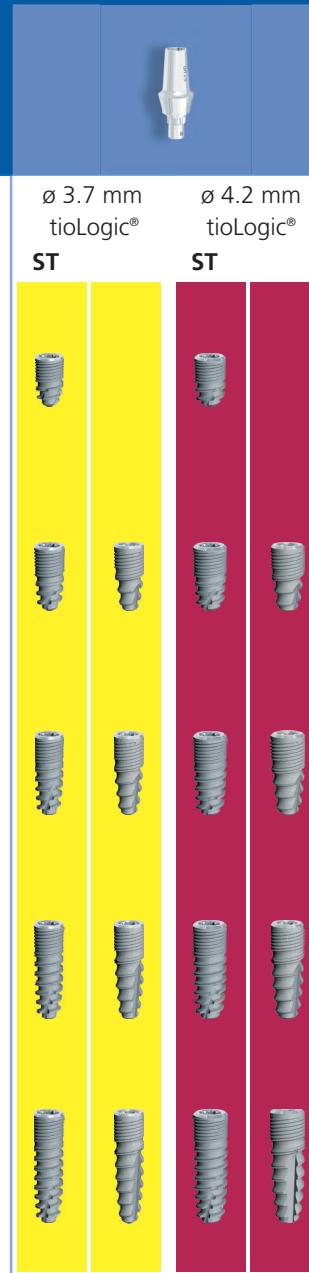

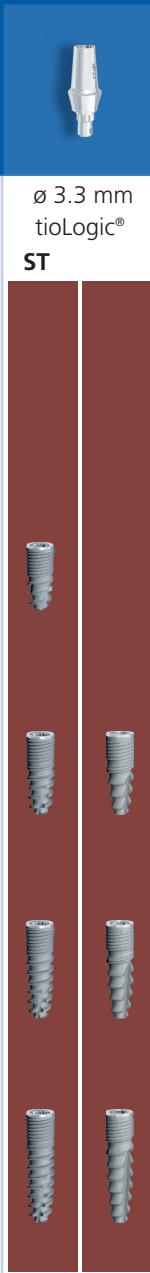

9.0 mm

11.0 mm

13.0 mm

15.0 mm

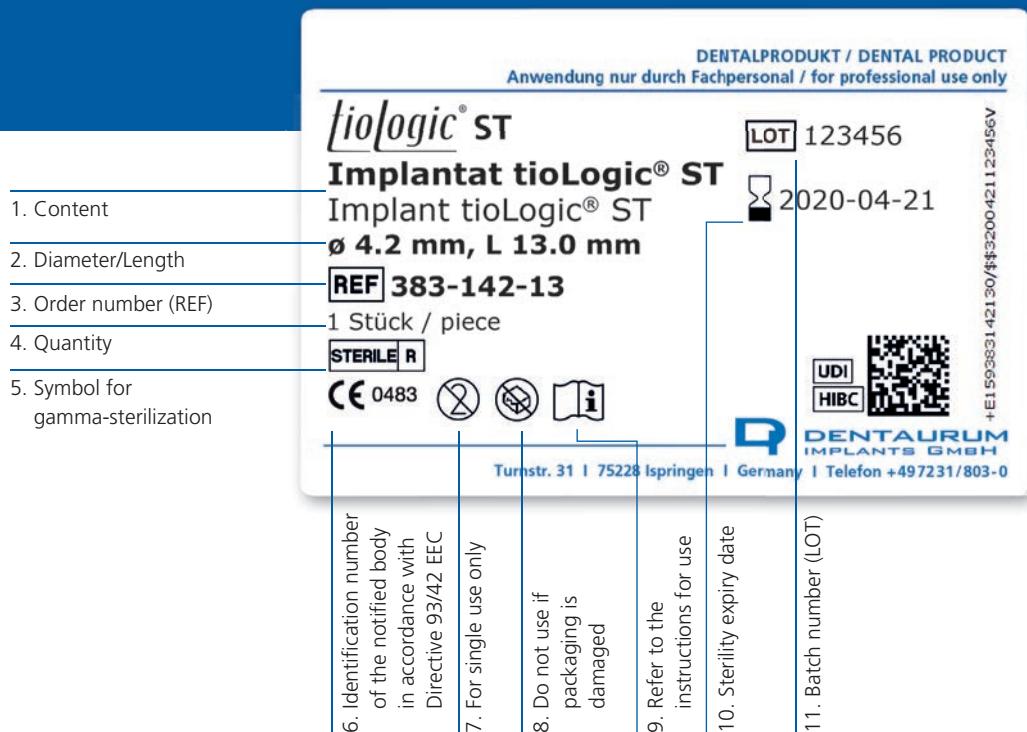

5 implant lengths.

All abutments and implants on a scale of 1:1.

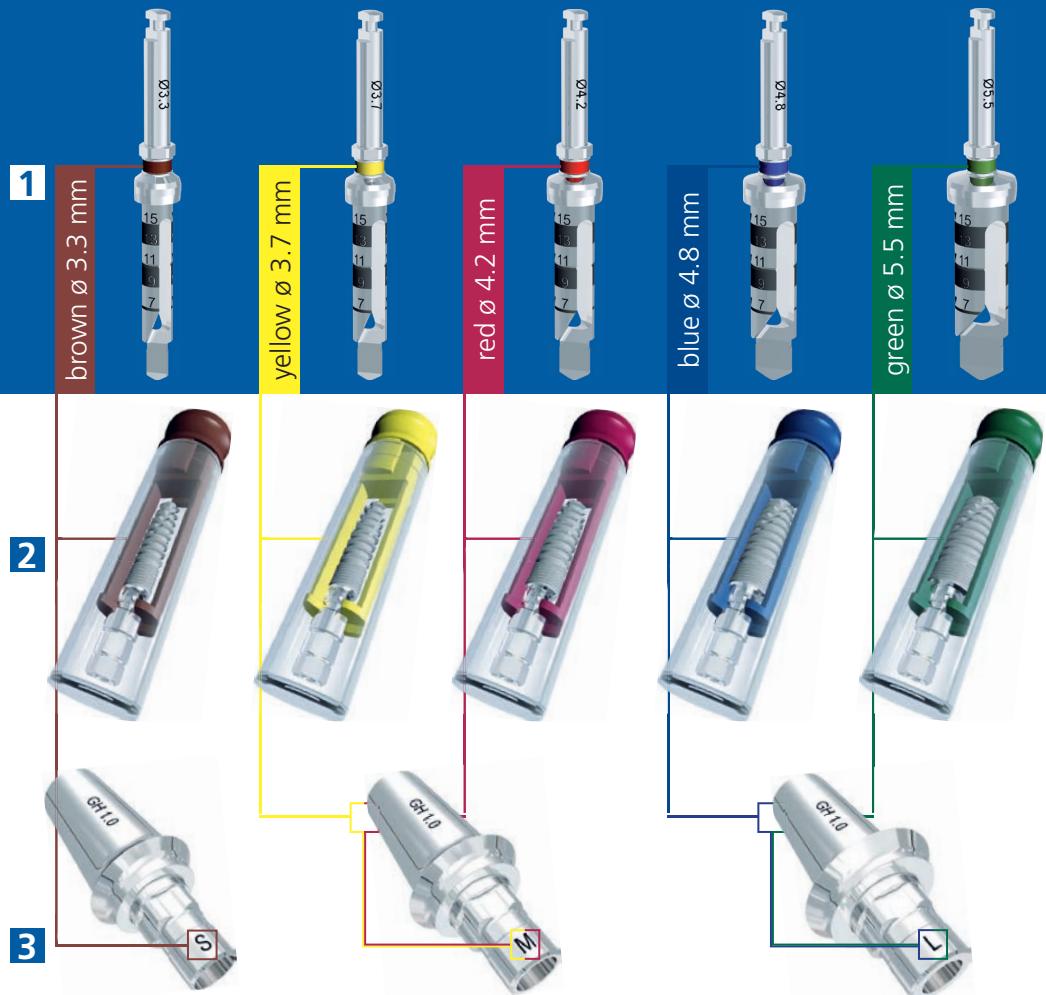

Product identification.

All information – quick, clear identification.

All basic information needed by users and assistants is on the label. The pictograms are intuitive and conform to international standards, thus providing a rapid and clear flow of information.

Further labels for the patients' files, the PatientPass and further documentation such as the surgery protocol are also included.

The identification concept of the tioLogic® implant system features an easy, intuitive identification system that provides the operator with maximum reliability. The system uses permanent color coding and clearly legible laser printing.

- 1** Instrument colour coding - all surgical instruments have a different colored ring on the shank for clear identification of the diameter. The color code for the diameter corresponds to that of the implant.
- 2** Implant color coding – the plastic implant holders are color-coded to indicate the relevant diameter.
- 3** S-M-L component laser marking - all components from closure screws and gingiva formers to the impression and prosthetic components are laser-marked with S, M or L to correspond clearly to the respective implant platform.

SURGERY

YES!

I WANT A MODERN IMPLANT SYSTEM.

It is essential that a modern implant system provides the operator with an optimal combination of high flexibility, clear organization, easy handling, efficient technique and maximum safety and reliability.

*tio*logic® ST

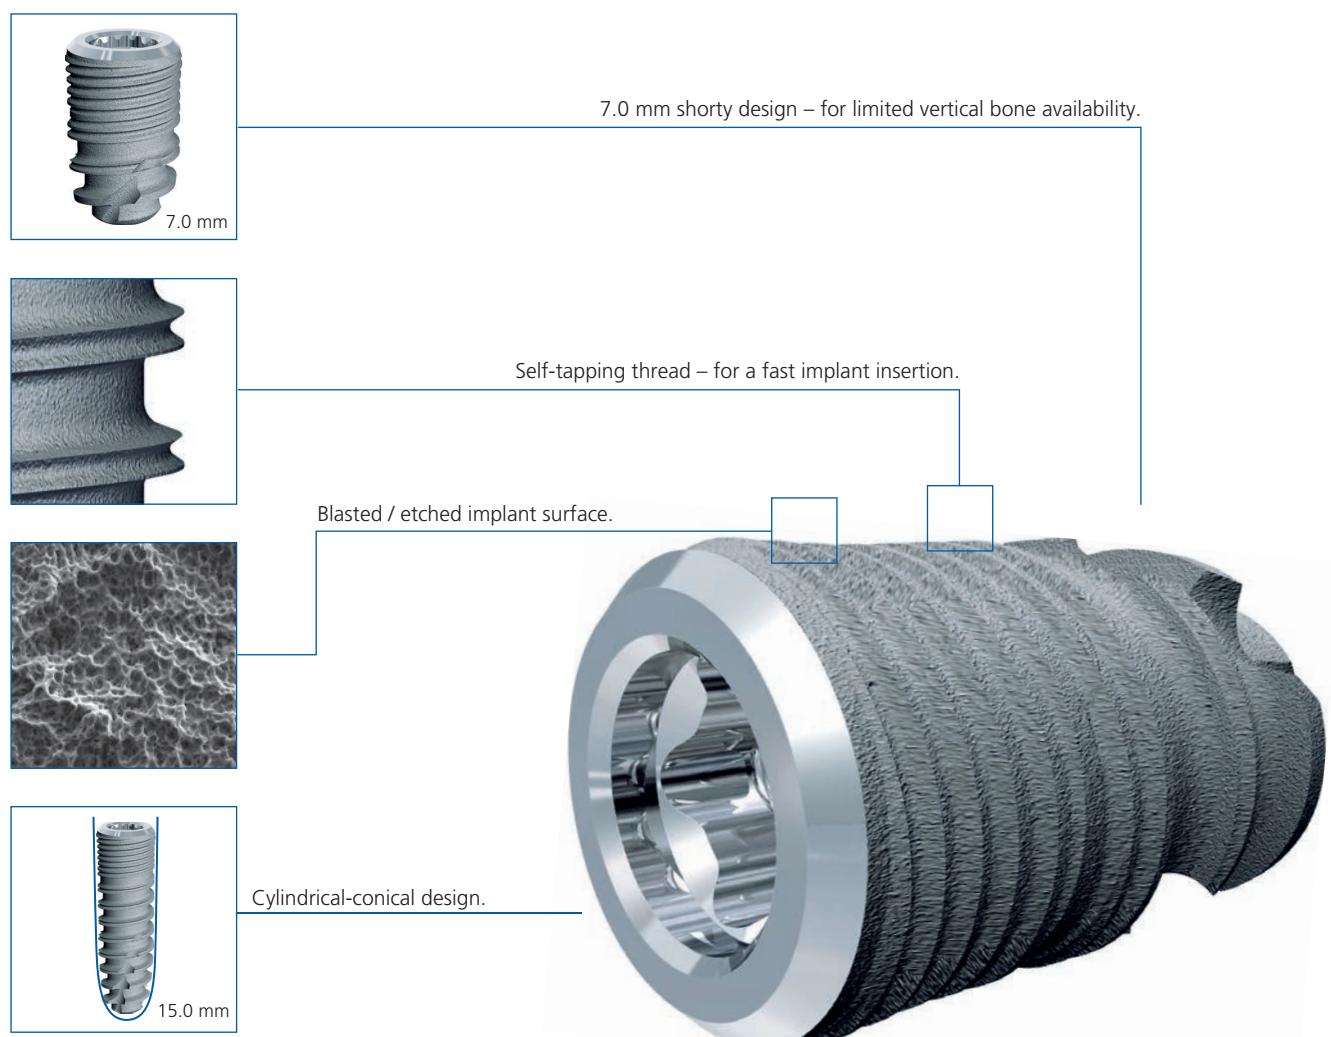

*tio*logic®

tioLogic® ST

The patented macro and micro design of tioLogic® has been further developed taking into consideration biomechanical aspects in order to positively influence implant placement and healing behavior as well as to extend the indication range¹. The modified self-tapping thread geometry and reduced thread pitch enable a quick and atraumatic implant insertion at a steady insertion torque and a high primary stability. The tioLogic® ST 7.0 mm implant also extends the indication range with reduced vertical bone availability.

All tioLogic® ST implants incorporate the proven S-M-L concept. They are therefore compatible with the existing prosthetic abutment series for tioLogic® implants and are an ideal complement to the tioLogic® product program.

CITO mini® - three steps to success.

1. Gingiva punch

2. Stepped drilling

3. Implant insertion

Small. Quick. Easy.

- Immediate loading in many cases
- Avoids augmentative measures
- Perfect solution for patients with reduced bone availability
- Long-term stability for hybrid-prostheses

More information on CITO mini®.

CITO mini®

The implant system.

Polished gingival shoulder.

Optimal soft tissue support.

Crestal fine thread.

Time-tested surface conditioning.

FEM-optimized thread geometry.¹

Self-tapping thread.

„All-on-4“ restoration

„All-on-4“ restoration

Highly aesthetical, yet economical restorations in an edentulous jaw on four tioLogic® implants (from Dentaurum Implants GmbH) with a framework milled from remanium® star and with a ceraMotion® veneer.

The amount of bone available in the anterior region is used in such a way that a fixed dental prosthesis over only 4 implants is possible.

tioLogic® digital.

The complete solution for the CAD/CAM processes from Dentaurum Implants.

At www.dentaurum-implants.com Dentaurum Implants provides a download service for tioLogic® CAD/CAM data records for **3shape**, **dental wings** and **exocad** and integrates them into the respective software.

ACCESSORIES

YES!

I WANT A MODERN IMPLANT SYSTEM.

Product development of surgical and prosthetic accessories at Dentaurum Implants also focuses on the user. An efficient, reliable, precise technique is only possible with an implant system that has specifically designed accessories.

SERVICE.

YES!

I WANT
QUALIFIED
EXPERT KNOWLEDGE.

In implantology in particular, comprehensive, concise and significant information is indispensable. Therefore most of the information around the tioLogic® implant system are available both in digital and in traditional form.

Service.

Information material.

B Basic user documentation.

The basic folder presents facts concisely on the most important tioLogic® components and their advantage to the user. The Surgery Manual describes the complete process from diagnosis and implant insertion to impression taking. The Prosthetic Manual carries on where the Surgery Manual left off; describing various methods of prosthetic restoration by means of many diagrams and photos.

S Specialized user information.

Use the Implant Planning form to fill out all relevant planning details and transfer these to the dental laboratory for prosthetic planning. The Surgical Protocol documents after surgery all data specific to the implant and the insertion operation for each individual case. The Practice Record Card acts as a messenger between dental office and dental laboratory making for effective and rapid communication of all relevant implant and prosthetic data.

G Documentation for personal consultancy.

This specialized communication medium is designed for use in personal patient consultancy. It acts as a guideline and explains the principle behind implant treatment in a clear and comprehensible manner.

P Patient Information.

Extensive patient advice and education builds trust in the clinician and is an important premise for the success of treatment with dental prosthetics. Dentaurum Implants offer a compact range of high-quality materials developed in close cooperation with experienced users.

Technical information ■ Quality system

Quality assurance.

Quality assurance for the user and patient.
Dentaurum Implants looks back on more than 20 years of experience in implantology, the mother concern Dentaurum, on 130 years experience in prosthetics. This solid foundation ensured that development was based on a wealth of experience with the focus on the user and high-quality production of the tioLogic® implant system.

In all its business activities Dentaurum Implants GmbH, like the parent company Dentaurum, meets the requirements of the international quality management standards.

Norms:

- DIN EN ISO 9001:2000
Quality Management Systems
- DIN EN ISO 13485 Medical Devices –
Quality Management Systems

The term "quality management" covers systematic planning, implementation and documentation of all activities that have an influence on the quality of a product before, during and after its manufacture. The focus is not therefore solely on the final inspection of a product but on continuous quality control during development of the product, from raw material to manufacture right through to storage and sale. The above standards define in detail the criteria for ensuring comprehensive quality assurance by a company for all its operating procedures.

Based on this quality management system Dentaurum Implants guarantees traceability and that the quality of the products and services will meet the expectations of the customers and patients. The products fulfill the fundamental requirements of medical products in terms of product performance and patient safety as defined in European laws and directives. As the respective products of Dentaurum Implants GmbH meet the requirements of the European Directive 93/42/EEC for medical products, they carry the CE mark.

Eco-management system.

The eco-management system and the quality management system are integrated in the Dentaurum Group management system. The eco-management system is implemented by the Management System Working Group, which is made up of members representing eco-protection, hazardous goods safety, health and safety, material science and quality management.

Scope of validation.

The eco-policy, eco-management system, eco-programme, eco-audit completed, eco-audit scheme and the basic environmental statement of Dentaurum GmbH & Co. KG and Dentaurum Implants GmbH, Ispringen, Turnstraße 31, Germany, fully comply with the standards and requirements of the Regulation (EEC) No. 761/2001 (EMAS II).
